

GC1 Oval Paddle Hook Latch

Features

- Our new 'Oval' paddles have superb appearance and are quick and easy to install
- Made in tough, self-colour moulded materials for corrosion resistance, they are flush-fitting and have no visible mounting points
- Hook-latch design incorporates a spring-loaded stainless steel 'hook' that projects vertically from the back of the paddle case rather than the conventional slam-bolt. This gives a much smoother action - doors close easily, and do not 'bounce back'
- Stainless steel loop striker ensures positive engagement which resists vibration
- As door closes, the ramped face of the hook meets striker and is forced laterally. Once closed, the spring action secures hook under striker loop
- 'Deadbolt' action, so that when key cylinder is locked, both flap and hook are held rigid. Paddles will not slam in locked condition

Material

- Case and flap: Glass-filled nylon, black lightly textured finish
- Mild steel components are zinc plated for corrosion resistance

Notes

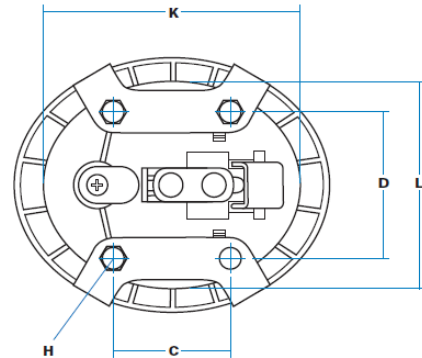

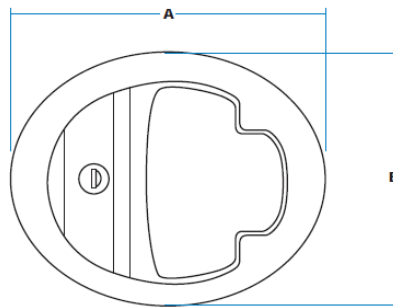

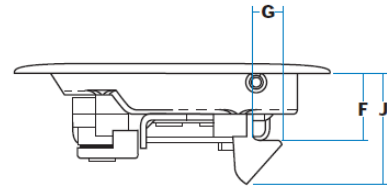

- Unit fits through aperture, is clamped against panel by two shaped brackets, and secured by bolts into four threaded bosses
- Gasket provided
- Stainless steel loop striker (**G00406**) sold separately
